

R.M. of Arm River, No. 252 Policy

Rural Municipality of Arm River, No. 252 Electoral Boundary Review Policy

Last review date: May 4, 2022
Next review date:
January 1, 2026

POLICY NUMBER
200-7 ELECTION BOUNDARIES

Purpose

- 1 This policy establishes how and when R.M. of Arm River, No. 252 (the Municipality) determines and reviews its electoral boundaries.

Policy Statement

- 2 Council by resolution may divide the Municipality into voting subdivisions (Divisions) and, from time to time, alter the boundaries of those Divisions, as authorized by section 49.1 of the *Municipalities Act*, and the *Local Government Election Act*.
- 3 Equal and effective representation is fundamental to any democratic electoral system and is the Municipality's primary goal of an electoral boundary review.
 - (1) Equal representation is the principle that all votes count equally and therefore the population of each Division should be relatively equal.
 - (2) Effective representation helps ensure that Municipality residents have the ability to access an elected representative equal in strength to the rest of the population.
- 4 The Municipality is committed to designing clear, distinct, and easily identifiable electoral boundaries.

R.M. of Arm River, No. 252 Policy

Policy

Criteria

- 5 The Municipality's electoral boundaries are reviewed and established based on the following criteria:

Population per Division

- (1) The optimum Population per Division is the primary factor in determining electoral boundaries. The Municipality's total population divided by the number of Divisions is the optimum Population per Division.
- (2) For the purpose of this policy, the Municipality's total Population is determined using the last Municipality census profile and/or the Federal Census official population list from Statistics Canada, whichever was completed most recently.
- (3) Additional factor to be considered to determine if variance in population is acceptable is the fact that there is a disparity in infrastructure development due to "traffic" passing through the municipality to access recreation sites and commercial and agricultural resources outside the municipality
- (4) Given the natural geographic boundary created by splitting the municipality in half (north and south) with 18 miles to the north and 18 miles to the south seemed the most logical and equitable division of land mass. The east/west divisional boundaries are based on the ranges (being 27, 28 and 29) Division 3 and 6 have much smaller land mass (and therefore potentially fewer voting land owners) however, these divisions are near the Town of Davidson and encompass one-half of the Village of Girvin and have more dense population (voters).

Electoral boundaries are designed so the Population of each Division is within a range of $\pm 66\%$ from the optimum population of the municipality. Electoral boundaries are designed so the Population of each Division is within this range. While the southern Divisions 2 and 3 encompass the former "Village of Girvin" which inflates their populations, Divisions 5 and 6 have 10 miles of paved roadway which is a strong draw for population and population growth.

R.M. of Arm River, No. 252 Policy

Future Growth

- (4) Electoral boundaries are designed with the objective, wherever possible, to recognize how the timing of potential growth areas will affect population deviations.

Easily Identifiable Boundaries

- (5) Wherever possible, electoral boundaries are identifiable to the public by using major roadways and significant natural and man-made barriers such as the river, ravines, railways, etc.

Least Number of Changes

- (6) Electoral boundary proposals should involve the fewest changes possible to accomplish the required adjustments.

Communities of Interest and Diversity Within Divisions

- (7) Electoral boundaries are designed to ensure communities with common interests or sharing a common roadway access are kept within the same Division.
- (8) Where possible, the distribution of residential, commercial, industrial, institutional, and green space areas between Divisions is taken into account so that each Division contains a mixture of these developments.
- (9) Where possible the optimum population per division should take into account the Municipality Plan, Intermunicipal Plans, and Area Structure Plans.
- (10) Where possible, the optimum Population per Division should respectively include both urban and rural areas.

R.M. of Arm River, No. 252 Policy

Historical Divisional Boundaries

- (11) Consideration is given to the historical electoral boundaries within an area but it is not mandatory that these boundaries are used.

Frequency

- 6 A review of the electoral boundaries will be monitored on an ongoing basis, but at a minimum at least once every 4 years preferably prior to a general election, to ensure criteria of this policy are met. Said review is to be completed by a Committee appointed by council which is to include administration and council representatives.
- 7 Any revisions to the electoral boundaries must be completed at least one year before a Municipality general election commences.
- 8 Reporting of recommendations of reviews conducted are to occur within 3 months from the commencement of the review and the recommendations are to be made to council at a regular meeting.
- 9 Public consultation is to be an established part of the review process and public notice of the intent to engage in a review and public notice of the report prior to presentation to council is required.
